## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1, 2, 4-8,10-14,16-22,24-26 have been considered but are moot in view of the new grounds of rejection.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1,2,6,7,8,12,14,20,21,22,26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hoglund et al. (Hoglund), US Patent 6,829,480, in view of Inoue et al. (Inouse), US 6,167,513.

Regarding claims 1,2,6,7,8,11,12,,14,19,20,21,22,25,26, Hoglund discloses a method of managing allocation of a private home address to a mobile node, comprising: receiving a registration request from the mobile node; allocating one of a public home address and the private home address to the mobile node based on a predetermined policy; if allocated the private home address, further: decapsulating a packet from the mobile node to a correspondent node, the packet including a source address and an originating source port; modifying the source address and the originating source port if the correspondent node belongs to a different administrative domain; and forwarding the packet to the correspondent node (col. 4,lines 53-60 and col. 5,lines 17-38 and col. 6,line 8- col. 7,line 43).

Hoglund fails to explicitly disclose wherein modifying the source address and the originating source port comprises replacing the source address with a public routable source address and the originating source port with a source port of the public routable address.

In a similar field of endeavor, Inoue discloses wherein modifying the source address and the originating source port comprises replacing the source address with a public routable source address and the originating source port with a source port of the public routable address (reads on an inner IP header with a new source and destination addresses) **(see Figure 3)**.

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Hoglund to include replacing the source address with a public routable source address for the purpose of allowing suitable mapping and security across networks.

4. Claim 4,5,10,11,16-19,24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hoglund and Inoue, in further view of Chen, US 2005/0265363.

Regarding claims 4,5,10,11,16-19,24 and 25, Hoglund and Eisink disclose the limitations of claims 1,7,13. However, the combination fails to explicitly disclose tunneling a response packet to the mobile node and obtaining the address from a Dynamic Host Control Protocol server.

In a similar field of endeavor, Chen discloses tunneling a response packet to the mobile node and obtaining the address from a Dynamic Host Control Protocol server (pages 1-2 [0010-0011]).

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Høglund and Eisink to include tunneling a response packet to the mobile node and obtaining the address from a Dynamic Host Control Protocol server for the purpose of allowing transferring data packets among different networks.
